

## Enhancing Nutrient Efficiency

At Sound Agriculture, we unleash the power within plants to allow them to be more resilient, efficient, and productive. Our approach enhances the natural ecosystem to help plants thrive.

SOURCE™ is the only product that targets both nitrogen and phosphorus, nutrients that are crucial for healthy crop production. By fixing nitrogen and unlocking phosphorus, we are able to improve nutrient efficiency - resulting in higher yields and a better return on investment.

Increased Yield  
**7.5 bu/acre**

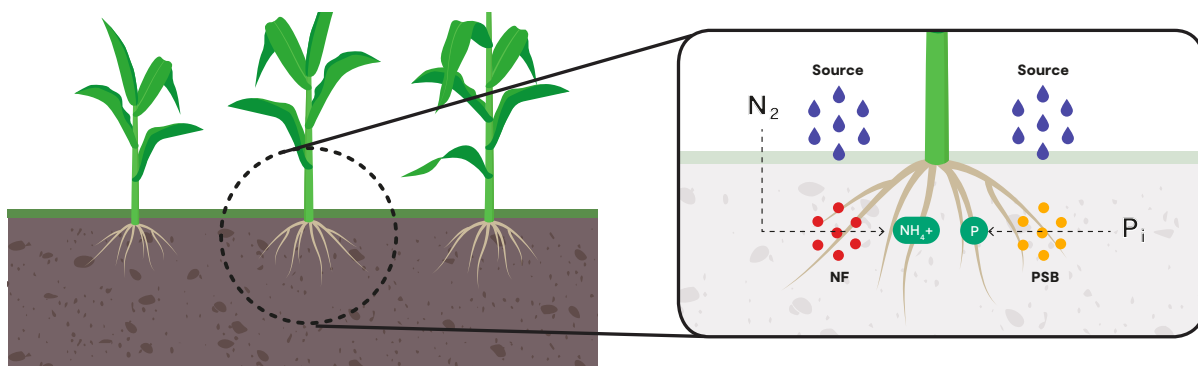

Consistent Results  
**83% win rate**

Flexible Application  
**V4 - R3**

## How SOURCE Works

SOURCE is applied as a foliar spray and activates microbes at the root zone that fix atmospheric nitrogen and unlock phosphate. When crops are able to take in these nutrients throughout the season, the result is healthier plants and improved yield.

## Reliable Performance, Predictable Results

SOURCE performs consistently across all major corn producing areas in the US. Reliable results are attained in a variety of soil types and with different management practices. Strong performance is also seen when growers use sustainable management practices like conservation tillage that can improve soil health and lead to more robust microbial communities.

## Performance Optimizer

The Performance Optimizer uses soil pH, organic matter (OM), and cation exchange capacity (CEC), coupled with four years of field data to predict performance. We're taking out the guesswork to make application more precise than ever before. By entering pH, OM, and CEC for a field, you can discover the predicted performance outcome.
