

Introducing SOURCE™ Soybeans

At Sound Agriculture, we are committed to providing growers with new tools to enable nutrient efficient growing methods that support the demands of today's environment and a grower's bottom line. That's why we're excited to introduce SOURCE Soybeans – available on a limited basis in 2021.

Like SOURCE Corn, SOURCE Soybeans is a foliar-applied chemistry that is easy to use and provides consistent performance. With a **new active ingredient tailored to soybeans**, it mimics natural plant-to-microbe signals to activate microbes at the root zone that fix atmospheric nitrogen and unlock phosphate.

Increased Yield
2.4 bu/ac

Consistent Results
75% win rate

In traditional crop rotations, soybean fertility is often an afterthought. This can be a costly mistake, especially in high yielding environments where soybeans struggle to keep up with late season nutrient demands. SOURCE Soybeans is specifically formulated to **increase plant available phosphorus and nitrogen during grain fill** to provide the highest yield potential.

SOURCE mimics natural plant-to-microbe signals to enhance the nutrient cycling engines for N and P

Stable, storable chemistry

Low use rate: 51.2 ac/gal

Timing: R1 application

Pack size: 1 Gallon
